aeSolutions' Industrial Cybersecurity Group Expands with Krish Sridhar

Greenville, South Carolina, USA – March 28, 2016 – aeSolutions is proud to announce that Krish Sridhar has joined their Industrial Cybersecurity Group as their Senior Business Manager. Krish will be based out of the central New Jersey area.

Krish Sridhar is a subject matter expert on cybersecurity solutions applied to industrial control systems. He brings over 20 years of industry experience with process automation, high availability architectures, industrial networks and application software. Krish has executed many cybersecurity risk and vulnerability projects for chemical, specialty chemical, and CFATS-compliant companies per the NIST framework and ISA 99/IEC 62443 standards. His particular expertise and experience is focused on developing and designing holistic cybersecurity programs for industrial control systems leveraging proven IT technologies and industry best practices.

"I am thrilled to have Krish join our Industrial Cybersecurity team", states John Cusimano, aeSolutions' Director of Industrial Cybersecurity. "Krish is highly respected in the industry for his ability to help industrial organizations develop ICS cybersecurity programs that are compliant with industry standards yet tailored to align with the organization's unique operational requirements and risk management system. Furthermore, Krish has a proven track record in helping organizations conceptualize and implement effective and sustainable cybersecurity solutions."

In his new role with aeSolutions, Krish will manage the planning and implementation of cybersecurity programs spanning multiple disciplines and sites while building relationships and developing new business opportunities with key clients. Krish will work closely with various stakeholders within organizations to develop detailed implementation protocols, procedures, and guidelines to help manage the lifecycle of a cybersecurity program.

About aeSolutions

In business since 1998, aeSolutions is a process safety consulting, engineering and automation company that provides process safety lifecycle solutions and tools. They focus on helping clients close the functional safety loop and achieve their risk management objectives through process risk management, engineering automation, industrial cybersecurity, safety instrumented systems, process control system design, and related operations and integrity management systems.
