

# Process Safety Leadership Workshop

Define “great” process safety and your path to achieve it.

## An Opportunity for Improvement Born from Disaster

Following the Texas City disaster and the subsequent publishing of *Failure to Learn: the BP Texas City Refinery Disaster*, many companies were awakened to the idea that their top leaders play a much more defining role in the success of their organization’s integrated process safety program and that process safety culture is driven by leadership. This realization leads many to the question, how do we engage top level leadership so that they influence culture? And, have we properly defined and communicated what our core values are around process safety throughout the organization?

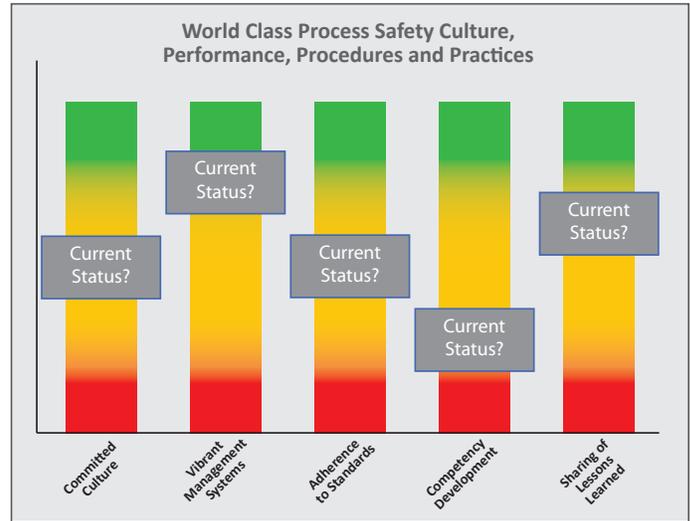

The Center for Chemical Process Safety (CCPS) has defined what great process safety looks like in their Vision 20/20. The five tenets provide the benchmark for industry best practice with the collective goal of less incidents. This is accomplished through a united organization with strong leadership that has process safety as a core value.

**Working together, leadership can change the Process Safety culture across their organization.**

## Workshop

aeSolutions offers an effective means to reach your leadership teams through a Process Safety Leadership Workshop. We understand the importance of their time and capitalize on the value of their collective ideas. The workshop is a 6 to 8 hour, interactive format in which aeSolutions will facilitate group discussions and small

**Working together, leadership can change the Process Safety culture across their organization.**

breakout exercises around the five CCPS tenets to help lay the framework for what great process safety looks like within your organization. Throughout the workshop, your leadership team will identify areas they can influence in their day to day activities and better understand the impact they have on process safety and their role in shaping process safety culture. The workshop is a platform to start aligning goals and determining tangible actions as a leadership team.

## Key Workshop Concept - The 5 Tenets

- Enhanced Application of Lessons Learned
- Committed Culture
- Vibrant Management Systems
- Intentional Competency Development
- Disciplined Adherence to Standards

## Value

What will your Leadership Team gain from this workshop?

- Increased awareness that strong Process Safety Management Systems and Culture are integral to a highly reliable organization and attaining operations excellence
- A better understanding of what participants can do in their leadership roles to promote sound process safety principles and drive putting them into practice
- Alignment of the Leadership Team on priorities and commitments to process safety
- The foundation for goal setting and risk based investment for 2016 and beyond
